Automated meeting room booking system

Contents

- Introduction to the Application
- Features
- UI Snapshots
- About the Team & Highlights from their Learnings.

Introduction

The system automates the procedure of booking a meeting room in a company. Employees can import the users, search for the meeting rooms and book the meeting room based on their requirements.
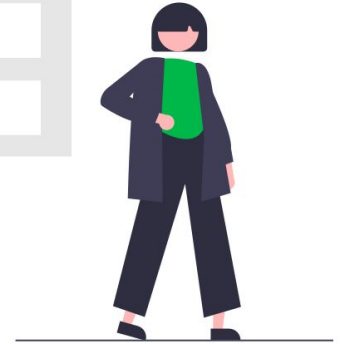

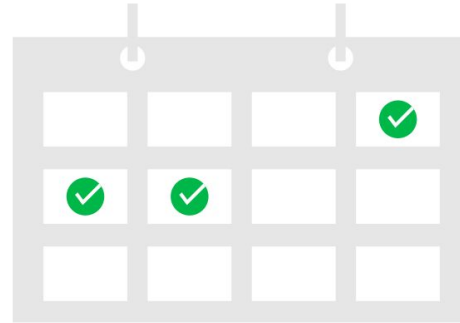

Key Features

- There are 3 different types of users based on their Role i.e. Admin, Manager & the Member.
- Admin can Create & configure the meeting rooms.
- The charges of the meeting room per hour are calculated on the basis of Seating capacity of the Room and the Amenities available in the room.
- Based on the meeting type, their are mandatory amenities which are included to calculate the charges per hour of the room.

Key Features

- The manager can view all his upcoming meetings and book a meeting room.
- Once a meeting room is booked by a manager for a particular date & time, then the same meeting room can not be booked by any other for same date & time.
- Manager will have to pay the credits post booking and his credits get renewed by 2000 every Monday.
- Managers can add the members for the meeting and post the meeting manager & members can provide their feedback too.

Project Timelines & Approach

Let's know each other : Sept 12, 2021
Had virtual calls, discussed each other's strengths & weaknesses. Discussed about what our approach should be towards the project. Planned out the project structure.

Working Tight : Sept 23, 2021
Closely worked together day & night, dealing with code merges, fixes and pull requests. Respecting each other's work and valuing time.
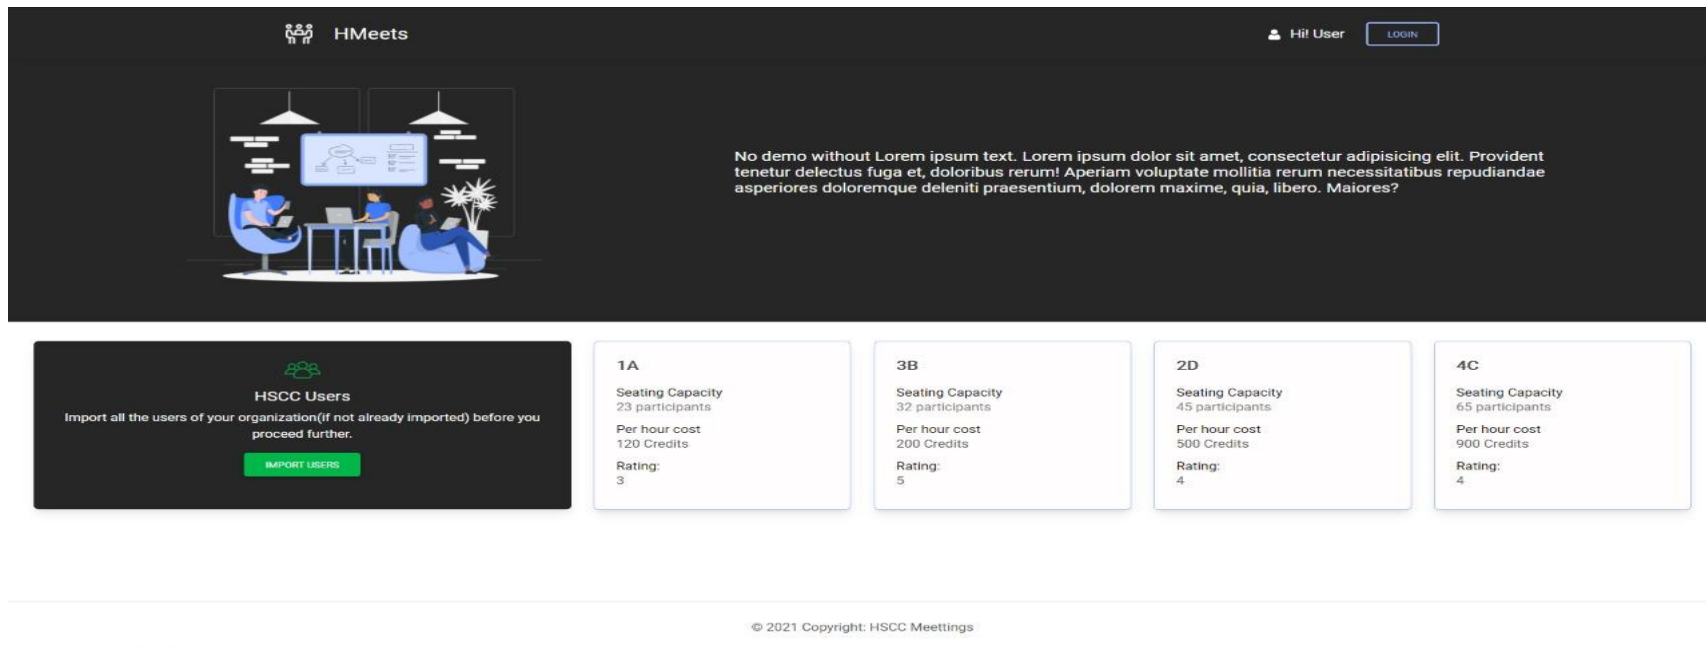

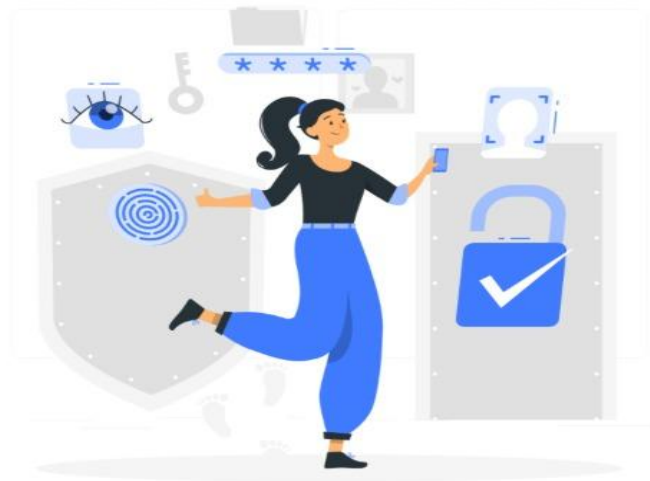

Let's do it : Sept 17, 2021
Work Division, formation of different teams, began collaborating, gained momentum & increased focus towards the goal.

Project Submission : Sept 26,2021
Fixed the loose points, created all the documents and submitted the project before deadline.

We are people with **different** ideas, who take the **responsibility** to get the things **done** and hence we **succeed**.

\- **Team TECHYONS**

Got a good idea about the overall workflow of java based projects and learnt a lot new concepts in short period of time

I became better at Sql, I've gotten familiar with Github and collaborating on it. I also got a better idea on splitting the work and the importance of proper planning.

First of all learnt TEAM WORK. Secondly, hands on experience on layered architecture of java, through our project. Experience on how to use github for collaboration with team members.

------ HIGHLIGHTS FROM OUR LEARNINGS -------

I now strongly believe, if we do what we like, then it doesn't feel like a lot of work even if we work round the clock, everyday.

-Rishikesh Shede
rishikesh.shede@hsbc.co.in

The project experience was an enlightening one
It was a collaborative effort that required me to adapt to the skillsets of others and adjust to the version of myself that best served the team and the project.

-Alan John
alan.john@hsbc.co.in

Through Codefury, I believe I was able to successfully implement all those concepts to practice which I had learnt in the training. I took time to implement, looked out to fix the bugs and improved my weak areas, which led to my increased overall growth.

Working and collaborating with team.
Use Java and jsp in project effectively. Effective use of github. Overall experience was great!

It was the good experience how teamwork can help us to achieve the goal . This helped me to make my concepts more clear and specially learnt much about the use of github for collaboration.

I became better at DBMS, I've gotten familiar with Github I also got a better idea on splitting the work and also get an opportunity to up upgrade my skill set.
